GAS SPRINGS

2019

HIGH QUALITY SPRINGS

ROC supply a market-leading range of gas springs to the automotive aftermarket.

As the name suggests, automotive gas springs use compressed gas to support the opening and closing of a car's boot, tailgate, or bonnet by aiding the elevation and holding the weight once open. We also include a small range of dampers which provide a controlled opening on a car boot.

The ROC gas spring range covers almost every car in the European market, with the vast majority supplied complete with end fittings for ease of installation.

There is a common misconception that replacement automotive gas springs are only available from vehicle main dealers. This is no longer the case and all ROC gas springs are produced to OE matching standards, and can therefore be installed by authorised workshops without any warranty restrictions.

ROC's philosophy is to produce a complete range of springs, and to maintain high stock levels at each of our distribution centres in Sweden, Germany, the UK, and Russia, ensuring excellent availability and short lead times for our customers.

In order to guarantee customers the best service and quality, ROC are certified to ISO 9001 and ISO 14001, and hold the EAC certificate of conformity as required for the Russian market.

In addition to gas springs, ROC offer comprehensive ranges of coil springs, leaf springs, U-bolts, and sport lowering springs.

ROC offer all customers high quality products, professional service, and excellent availability.

Important Information

1. Application

- 1.1. ROC's gas spring range is primarily designed for cars in the European market, and covers the majority of applications available.
- 1.2. ROC gas springs are supplied complete with end fittings for ease of installation.
- 1.3. Unless specifically stated otherwise, the listings in this catalogue are for standard unmodified vehicles. They are not for vehicles that have been extra equipped with spoilers, speakers or other additions that may affect the weight of the bonnet, boot or hatch. Similarly, an aluminium bonnet replaced with a steel bonnet (e.g. after an accident) may also prove to be too heavy for the springs listed.
- 1.4 The gas springs in this catalogue are stock items.

2. Safety

- 2.1. Gas springs contain oil and pressurised gas. Never attempt to open or drill into a gas spring.
- 2.2. For safety, spring installation should be undertaken by a competent person and instructions from a recognised repair manual should be followed.
- 2.3. Compare the design, length, and end fittings against the existing spring.
- 2.4. Check the mounting points on the body of the vehicle are clean and in good condition. If damaged, they should be changed or repaired before the replacement spring is installed.
- 2.5. Gas springs support the weight of a vehicle's boot or bonnet. To avoid injuries, always ensure that the boot or bonnet is secured before replacing springs.
- 2.6. Where the end fitting is a "ball and socket" design, it is important that the safety clips are correctly located after fitting.
- 2.7. Where applicable, we recommend that gas springs are replaced in pairs.

3. Design and warranty

- 3.1. Gas springs consist of a pressure tube, piston rod, piston, seals, and other components. They contain a small amount of oil that produces a damping effect, as well as keeping the seals lubricated.
- 3.2. Gas springs are filled with compressed nitrogen, which forces the piston rod to extend once compressed.
- 3.3. The gas pressure within the spring is set to provide the correct force, based on the weight of the boot or bonnet.
- 3.4. Cold temperatures reduce the lifting capabilities of gas springs - the force stated on a gas spring is established at a temperature of 20°C and the operating force of the spring will then alter depending on the environmental temperatures during use, with variation at a rate of +/- 0.34% per change in degree Celsius.

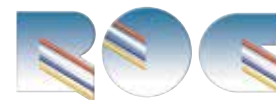

4. Quality

- 4.1. ROC gas springs are made in accordance with ISO9001 & ISO14001.
- 4.2. ROC gas springs are inspected and tested before delivery.
